Human Papillomavirus Screening and Management Recommendations
Women >65 years of age

Click here for topics associated with this algorithm

Definitions
- Adequate screening – 3 consecutive negative cytology results or 2 consecutive negative co-testing results within the last 10 years; most recent of either tests must be within the past 5 years
- hrHPV – high-risk HPV
- ASC-US – atypical squamous cells of undetermined significance
- NILM – negative for intraepithelial lesion or malignancy
- LSIL – low-grade squamous intraepithelial lesion

Notes
- Post-hysterectomy and no history of CIN2+ = no screening recommended
