- [Cutaneous Direct Immunofluorescence, Biopsy](#)
- [Herpes Gestationis Factor \(Complement-Fixing Basement Membrane Zone Antibody IgG\)](#)
- [Bullous Pemphigoid Antigens \(180 kDa and 230 kDa\), IgG](#)

<sup>a</sup>The Herpes Gestationis Factor (Complement-Fixing Basement Membrane Zone Antibody IgG) test includes assessment of bullous pemphigoid antigen antibodies (IgG BP 180), which are characteristically increased in pemphigoid gestationis along with complement-fixing basement membrane zone antibodies. The Herpes Gestationis Factor test is the recommended test for evaluation of pemphigoid gestationis; the Bullous Pemphigoid Antigens (180 kDa and 230 kDa), IgG, enzyme-linked immunosorbent assay (ELISA) test can be ordered separately.

<sup>b</sup>See [Monitoring table](#) in Epithelial Antibody-Associated Immunobullous Diseases Testing topic in ARUP Consult for specific tests for monitoring this disease.
